On September 22, 1914, a single German U-Boat sank the British cruisers *Aboukir*, *Hogue* and *Cressy*. War at sea was forever changed — the submarine had arrived. *Submarines: Sharks of Steel* doesn't begin in 1914, though. Four one-hour episodes will trace the development of

HOW THE WEST WAS LOST

As America grows more fascinated with stories of Native Americans, Discovery presents its new six part mini-series, *How The West Was Lost*. The mini-series will examine the settling of the American West from the point of view of the peoples who lived here before the White Man arrived. Descendants of Native American leaders and chiefs will finally get to tell their side of the story of treaties made and broken, of battles from the Little Big Horn to Wounded Knee. The series is not an attempt to place blame. As series historian Robert Utley says, "You cannot judge 1800's morality by our standards today."

How The West Was Lost can and does give respect to the voices of Native American peoples. The series is filmed on location at the sites of many historic battles. Each one-hour episode utilizes a rich vein of archival photography, as well as period journals, letters, and articles to describe the feelings of the settlers, soldiers and missionaries of the time.
